Programming C project

(Student Management System)

Name: Mustafa Mustafa

Student Number: B2105.010004

Department: Computer Engineering

Subject Name: Computer Programming-I

Subject Code: COM17

What is Student Management System?

The Student Management System is a web-based project that helps students manage their records. It has a feature-rich interface that enables users to easily add, update, and search for details.

About the project:

Talking about the features of this Simple system, the user can perform the CRUD(create, read, update, delete) operations to it. Like, add student details by entering his/her name, department name, roll number and GPA. The user can also view all the available

student records. Besides, the user can edit information as well as remove a student's whole data.

The system creates an external file to store the user's data permanently. This system is developed using C Programming Language and different variables, strings have been used for the development of it.
